

iGoogle

Feeling a bit left out of all the “Apps” on Smart Phones?

Now you can have the equivalent on your Google page with *iGoogle*. Everything from the *local* weather to train timetables, to dictionaries, inspirational quotes, tailored news and much, much more.

Just look for the [igoogle](#) link which can be found at the top right of the normal Goggle search page.

From there just click [Add stuff](#) to select from the hundreds of applications available – they are arranged by topic, most popular etc. and can also be searched for with keywords.

Each application can be rearranged on the page once added by just dragging its name bar.

You can make *igoogle* your home page. Click the drop down arrow to the right of the little house icon and choose Add or Change Home Page. Some browsers including Internet Explorer 8 allow more than one home page e.g. your service provider and *igoogle*.
